Dear Sir or Madam,

I am excited to apply for this position at your company. With a background in Mechatronics Engineering, professional experience in data science, and current research in AI, I am motivated to contribute to practical AI systems that connect advanced research with real-world applications.

I am currently pursuing an M.S. in Artificial Intelligence and Robotics at Sejong University, where my research focuses on Vision-Language Models, specifically GUI grounding for computer-use agents. Through my work at the Vision Language Intelligence Laboratory, I have developed strong skills in AI research, computer vision, and research paper writing.

Before my graduate studies, I worked as a Data Scientist at FPT Corporation in Vietnam, where I built forecasting models for electricity consumption and restaurant customer traffic, and analyzed large-scale web-log data for customer behavior modeling. I also gained hands-on computer vision experience by deploying a facial-recognition attendance system and developing an automated chicken classification system.

When I first came to Korea, my plan was to focus on my research at the Vision Language Intelligence Laboratory and return to Vietnam after graduation. However, this perspective changed after my internship at PIAspace. Although the internship lasted a little over one month, it gave me a valuable opportunity to experience Korean working culture directly. Through this experience, I realized that Korea offers an environment where I would like to continue learning, contributing, and building my long-term career.

To prepare for this goal, I began studying Korean after the internship and currently take an online Korean course three times a week. I am eager to grow professionally in Korea and would be grateful for the opportunity to discuss how my background, motivation, and research experience align with this position at your company.

For your consideration, I have attached my CV and included links to my GitHub and portfolio.

Thank you for considering my application.

Sincerely yours,

Xuan Hoang Le
